Gainesville, Georgia 30507

To Whom It May Concern:

I have used PreVasive on several projects at The Westminster Schools and have had nothing but positive results. Two bigger projects come to mind: First, we had a troublesome mold problem on the exterior of a wood building. After cleaning and painting, we treated with PreVasive and have not had a problem with mold on the exterior of that building in over a year. Second a dehumidifying energy recover unit had failed in one of our buildings causing the humidity to skyrocket and people begin to complain of a mold smell. We quickly cleaned the building and set up temporary dehumidification along with applying PreVasive throughout the entire building. PreVasive not only prevented the mold from coming back, it also eliminated the odor caused by the mold. We received many compliments on how we quickly cleaned up this building making it safe for occupants.

We have also used PreVasive on several other small jobs around campus related to controlling bacteria or mold. Currently we are looking at the possibility expanding our use of PreVasive on campus to include such areas as our daycare, lower school, wrestling room and locker rooms to help keep the environment free of bacteria and viruses.

I highly recommend PreVasive as a pathogen control solution. I have seen firsthand how well this product works and am quite impressed with the results.

Sincerely,

William D. Broome, CFM, SFP
LEED Green Associate
Director of Facilities
