

BigShot Maxim Registration

Organic Agricultural and Mosquito Pesticide / Fungicide

BigShot Maxim is registered in the US States annually according to the individual requirements of the state's departments of agriculture as an organic pesticide and fungicide.

BigShot Maxim is registered in several countries, contact PreVasive for more information.

BigShot Maxim meets all 6 FIFRA (Federal Insecticide, Fungicide and Rodenticide) Section 25b criteria and does qualify as a FIFRA 25(b). The product must contain only those active and inert ingredients that are listed in the regulation. Active ingredients are those ingredients that destroy, repel, or mitigate a pest.

BigShot Maxim meets all six conditions from 25(b) regulation under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) including the states departments of agriculture for pesticide products. However, these products are still pesticides and individuals in the business of pest control for-hire who apply exempt / registered products are still subject to the state Departments of agriculture for licensed applicators.

BigShot Maxim is registered as an unrestricted organic agricultural and mosquito control pesticide.

BigShot Maxim is processed in PreVasive EPA registered facilities.

PreVasive maintains the Certified organic certificates of analysis of ingredients on file.

PreVasive quarantines incoming Certified organic ingredients until 3rd party QC laboratory confirmation is received.
